## Robust handset with multiple alarm options

The M85 has a programmable alarm key, is shock, splash and dust resistant and can operate in extreme temperatures. Connectible with wireless and wired headphones, it can be used to send and receive alarms. Alarms can be triggered automatically or manually via programmable alarm key. Pressing this key can send a message or place an emergency call to a pre-defined number. Integrated sensors enable "man down" alarms: If in an unusual position or an

extended period of motionlessness is registered, an alarm is raised. The M85 also has a wrist loop that triggers an alarm if it is ripped from the handset. With compatible base stations, the M85 has access to features such as voicemail, call forwarding, call lists, caller identification, or corporate directory search.
